

On Deep History And The Brain By Daniel Lord Smail

"Pressestimmen 'An intelligent disquiet runs through these pages.'--New York Times Book Review 'A creative and compelling synthesis of ideas, Smail's book provides an engaging and invigorating analysis of our history.'--Science (Aaas) 'A provocative thesis... Radically rethinks the relationship between biology and culture.'--London Review of Books 'Relax and enjoy. It's a good read, and it makes you think.'--New Scientist '[An] intriguing little book.'--American Scientist Synopsis When does history begin? What characterizes it? This brilliant and beautifully written book dissolves the logic of a beginning based on writing, civilization, or historical consciousness and offers a model for a history that escapes the continuing grip of the Judeo-Christian time frame. Daniel Lord Smail argues that in the wake of the 'Decade of the Brain' and the best-selling historical work of scientists like Jared Diamond, the time has come for fundamentally new ways of thinking about our past. He shows how recent work in evolution and paleohistory makes it possible to join the deep past with the recent past and abandon, once and for all, the idea of prehistory. Making an enormous literature accessible to the general reader, he lays out a bold new case for bringing neuroscience and neurobiology into the realm of history.
